

### Recent Statistics...

75%

*of employees have stolen at least twice from their employers.*

34%

*of cyber breaches are perpetrated by inside actors.*

30%

*of the IT industry's rogue insiders have an arrest history.*

20%

*of all electronic crimes stem from internal threats.*

Polaris can help you *prevent, monitor, and respond* to the many forms of insider threats with comprehensive services that can be deployed fully or incrementally based on your needs.

For more information, please visit us at [www.PolarisRsk.com](http://www.PolarisRsk.com).

### Polaris provides the following services to address insider threat risk:

- Background Screenings
- Site Inspections & Assessments
- Investigations
- Incident Response & Remediation
- Cyber Analytics
- Dark Web Monitoring

#### PREVENT

Polaris understands that there's no surefire way to prevent the theft of assets, the leaking of trade secrets, the dissemination of intellectual property, or other threats posed by rogue insiders. However, there are practical, proven steps that any company can take to manage these risks.

One easy method for mitigating any company's risk of internal espionage is underutilized: **the background screening**. Polaris can provide pre-employment checks, as well as periodic updates – monthly, quarterly, yearly, or however often the Client sees fit.

CERT National Insider Threat Center at Carnegie Mellon University's Software Engineering Institute, "Common Sense Guide to Mitigating Insider Threats," 6<sup>th</sup> ed., December 2018, pp. 4-38.

#### MONITOR

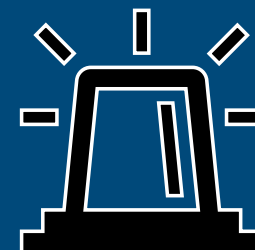

Polaris' monitoring capabilities ensure that your security is proactive and attentive to continuously monitor your risks. Our advanced **cyber monitoring** programs can track the activity of all those in your network – their hours, the files they access, and more – to establish a baseline of activity. We can then monitor for changes to these routines, which could indicate a potential threat.

The dark web often serves as the marketplace for stolen data – usernames, passwords, financials, IP and more – as insubordinate internal threats shop your info to third parties. Polaris is equipped with **dark web mining tools** to ensure that your content stays yours alone.

**Onsite inspections** can strengthen your office's physical security posture, while ensuring that your employees adhere to protocols for handling sensitive data.
